(54) MOBILE TERMINAL

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a means that sets a tone color where the combination and its audition can easily be set and that saves time and labor required for changes in the tone color assignment in a reproduction method for an acoustic signal, using a sound source means capable of reproducing a plurality of parts/a plurality of tone colors.

SOLUTION: A plurality of tone color data which are stored in advance are respectively assigned to each key entry means provided to this mobile terminal. In the case of revising the combination of the tone colors of musical data, the key is depressed for each part, and the musical data are reproduced by using the assigned tone color and heard for trial. By successingly depressing different keys, the tone colors assigned to the different keys are used to reproduce a designated part without stopping the reproduction, and when a desired tone color is obtained out, it is registered in a memory means. Since it is necessary to set a delicate affair among tone colors set to each part while making audition, the part having already been set is controlled so as to be reproduced synchronously at all times for the audition of a part that is being set at present.

LEGAL STATUS

[Date of request for examination] 19.03.2002
 [Date of sending the examiner's decision of rejection] 08.06.2004
